Things you should learn/remember from the planetarium show

The planetarium show covers several topics in chapter 1 of the book. So, while it may have been fun, there were some things I expect you to learn from it.

- Concept of light year and consequences of things being far away (pages 7-9)
- Definitions (page 2 & 6) and distance (pages 9-14) to the Moon, Sun, general distances to planets, stars, and galaxies.
- Why is the north star special (pages 15-16)
- Motions in the sky (pages 15-19)

Fun stuff
zodiac signs. See web page also for your true zodiac sign.

Strongly recommended bonus reading:
- Pages xxiv-xxv, How to Succeed in Your Astronomy Course

Interesting reading
- Pages xxvi-xxviii, Forward: The Meaning of The Cosmic Perspective
