CAREER OPPORTUNITIES

Industry employs the largest number of economists in such locations as banks, credit institutions, insurance companies, manufacturing firms, utilities and consulting firms. Economists work as management trainees, economic researchers, urban planners, bank officers, hospital administrators, consumer protection agents, and public administrators. A person with a bachelor's degree might work in government and industry positions that involve collecting and compiling data (knowledge of statistics is required). Quantitative Economists forecast changes such as interest rates and housing starts. Understanding how nations interact in the world economic arena is increasingly important. Economics can be the basis for careers in law, labor, politics, and journalism. A master's degree or higher is necessary for college and university teaching.
