

PSYCHOLOGY

COUNSELING DIVISION

The following requirements for the major are subject to change without notice. To assure that this information is current, you should consult with a Psychology counselor, or review articulation agreements via the Internet at WWW.ASSIST.ORG. You may also consult the Articulation Officer for specific articulation agreements.

CAREER OPPORTUNITIES: Psychology is the study of human behavior. Psychologists study the biological, physiological and genetic causes of behavior, as well as the emotional, social, and developmental factors involved. Psychology can be the foundation for a master's degree program in school counseling or for such fields as law, medicine, religion, government, management, marketing and industrial relations. Many positions require a Ph.D. Clinical and Counseling Psychologists use psychotherapy to modify the behavior of mentally and emotionally disturbed people. Community psychologists work with mental health organizations and welfare agencies. Developmental psychologists are concerned with changes in behavior from infancy through maturity. Experimental psychologists study behavior of people and animals (learning, motivations, emotion, sensation, perception, and the physiological bases of behavior). Industrial psychologists work on the interactions between people and machines in industrial situations.

NOTE: Math 70 is prerequisite to Psychology 9AB. Some universities accept Math 150 for Psychology 9A.
