**Woodland Campus Re-Entry Research Project**

Woodland Campus of Yuba Community College proposes to develop a research project to evaluate the impact of providing additional matriculation, career exploration, and other supportive services to re-entry students and to test the hypothesis that such services will result in increased success for students served.

This proposal includes multiple objectives:

1. A research study will be conducted to determine the effects of providing additional support to at least 50 re-entry students, using a post-test-only design with equivalent control groups, to measure the differences between experimental and control groups.

2. Identified support services will be provided through a re-entry program to the experimental group:
   a. At least 50 re-entry individuals will be identified and served (25 each semester) in orientation and registration sessions as a result of information and recruitment Components of re-entry program services developed by August 1, 1993;
   b. The experimental group of 50 core re-entry students will be provided with specific, on-going services scheduled September, 1993 through May, 1994, resulting in increased college success as measured by items in the research design;
   c. At least 80% of the experimental group will be assisted with goal development and provided mentor/intern programs, employment interviews, and/or contact with a university representative by the completion of the second semester.

3. Surveys will be utilized and student performance data will be gathered and analyzed by June, 1994.

4. Summary, conclusions, and recommendations will be combined into a report for systemwide distribution to 107 colleges.
