**Consortium to Disseminate Teaching Innovations**

As part of the Great Teachers Seminars, participants write papers on educational successes and innovations. More than 1,000 innovations have been collected which range from classroom management techniques, instructional strategies, curriculum innovations, assessment and testing approaches, to educational support systems and programs.

A Review Team composed of individuals from nine different colleges plans to gather these innovations together at one site, meet to establish criteria for sorting the innovations, obtain permission for dissemination from the contributors of the papers, refine and edit the papers, and efficiently disseminate them. The goal of this project is to review the innovations and publish those deemed most capable of enhancing quality instruction.

The distribution format is innovative and could be a model for future exchanges of excellence in education. The dissemination would include publishing on InfoNet, CAVIX, and InterNet computer bulletin boards.

A printed booklet would be provided for those who would not have access to computer networks. A copy of the booklet would be sent to each community college and individual participant in the project (including contributors and committee members). Additional copies of the printed booklet would be available on a cost-only basis.

The Executive Board of the California Community College Council for Staff Development (4C/SD) has agreed to continue the project once a model was established. The project meets the goals of the 4C/SD organization: to promote innovation and recognize excellence and provide a collaborative networking environment for sharing information.
