

IGETC:

5B - Biological Science without a Lab

Term: Fall 1991

Other:

II. OUTCOMES AND OBJECTIVES

A. COURSE STUDENT LEARNING OUTCOMES (The course student learning outcomes are listed below, along with a representative assessment method for each. Student learning outcomes are not subject to review, revision or approval by the College Curriculum Committee)

1. Logic of the Scientific Method: On examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, research paper, and/or oral presentation, students will be able to explain and evaluate various types of data relevant to the biological basis of behavior (e.g., experimental versus nonexperimental, human versus infrahuman, basic versus applied).
Fundamental Principles: On examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, research paper, and/or oral presentation, students will be able to identify and explain basic nervous system structures (e.g., neural and glial cells; brain stem and forebrain; meninges and blood-brain barrier) and functions (e.g., resting and action potentials; excitatory and inhibitory postsynaptic potentials; sensory transduction; agonistic and antagonistic drug effects).
2. On examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, research paper, and/or oral presentation, students will be able to apply fundamental psycho-psychological principles in their efforts to understand everyday life experiences (e.g., weight control, sexual behavior, insomnia, coping with cognitive decline).
3. fundamental psycho-psychological principles in their efforts to understand everyday life experiences (e.g., weight control, sexual behavior, insomnia, coping with cognitive decline).

The above SLOs were the most recent available SLOs at the time of course review. For the most current SLO statements, visit the El Camino College SLO webpage at <http://www.elcamino.edu/academics/slo/>.

B. Course Student Learning Objectives (The major learning objective for students enrolled in this course are listed below, along with a representative assessment method for each)

1. Evaluate the historical roots of physiological psychology, including topics from philosophy, evolution, and genetics.
Other (specify)
Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper
2. Categorize the structures and functions of nervous system cells.
Other (specify)
Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper
3. Analyze the relevant factors in the pharmacology of psychoactive drugs.
Other (specify)
Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper
4. Identify and distinguish basic neuroanatomical structures and concepts.
Other (specify)
Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper

5. Organize and explain the psychophysical, physiological, and phenomenological details pertaining to vision.
Other (specify)
Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper
6. Recognize and describe the most basic details of at least one nonvisual sensory system.
Other (specify)
Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper
7. Recognize and evaluate the nervous system structures and neurotransmitters most relevant to the control of movement.
Other (specify)
Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper
8. Distinguish and analyze sleep and wakefulness, theories of sleep and dreaming, and sleep disorders.
Other (specify)
Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper
9. Analyze the social, neural, and hormonal factors relevant to reproductive behavior.
Other (specify)
Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper
10. Distinguish and assess the phenomenological, behavioral, physiological, and social factors relevant to emotions such as fear and aggression.
Other (specify)
Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper
11. Contrast and explain the specific environmental, neural, and hormonal factors relevant to hunger and thirst.
Other (specify)
Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper
12. Explain and analyze learning and memory in terms of the neural mechanisms of synaptic plasticity.
Other (specify)
Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper
13. Evaluate the concepts and data relating to cerebral lateralization, especially as they are applied to language and its disorders.
Other (specify)
Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper
14. Differentiate between the symptoms and pathophysiologies of brain tumors, dementias, cerebrovascular accidents, pervasive developmental disorders, and infectious disease disorders.

Other (specify)

Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper

15. Differentiate and describe the symptoms and pathophysiologies of psychotic, mood, sexual, and anxiety disorders.

Other (specify)

Examination (e.g., m/c, T/F, fill-in, matching, essay), written essay, and/or research paper

III. OUTLINE OF SUBJECT MATTER (Topics are detailed enough to enable a qualified instructor to determine the major areas that should be covered as well as ensure consistency from instructor to instructor and semester to semester.)

Lecture or Lab	Approximate Hours	Topic Number	Major Topic
Lecture	3	I	Historical Roots of Physiological Psychology A. Philosophy 1. Epistemology 2. The Mind/Body Problem 3. Ethics in Research B. Evolution and Genetics
Lecture	4	II	Nervous System Cells: Structures and Functions A. Neural Structure 1. Dendrite, Soma, Axon, Terminal Button 2. Membrane, Myelin Sheathing, Protein Channel B. Neural Function 1. Resting, Graded, and Action Potentials 2. Saltatory Conduction and Neurotransmission C. Glial Cells in the CNS and PNS
Lecture	3	III	Pharmacology of Psychoactive Drugs A. Agonistic and Antagonistic Effects, Affinity B. Addiction and Withdrawal
Lecture	6	IV	Neuroanatomy A. Central Nervous System Structures and Functions 1. Hindbrain (Myelencephalon and Metencephalon) 2. Midbrain (Metencephalon) 3. Forebrain (Diencephalon and Telencephalon) B. Protective Structures of the Central Nervous System 1. Ventricles 2. Meninges 3. Cerebrospinal Fluid 4. Blood/Brain Barrier C. Peripheral Nervous System Structures and Functions 1. Somatic Branch 2. Autonomic Branch D. Directional Nomenclature
Lecture	5	V	Vision A. Psychophysics of Light B. Neuroanatomy of Visual Pathways 1. Straight Line 2. Lateral C. Cortical Analysis of Visual Information 1. Dorsal Stream 2. Ventral Stream D. Aspects of Visual Experience

			<ol style="list-style-type: none"> 1. Form 2. Color 3. Movement 4. Location 5. Identity
Lecture	2	VI	<p>Nonvisual Sensory Systems</p> <ol style="list-style-type: none"> A. Audition B. Gustation C. Olfaction D. Somatosensation
Lecture	2	VII	<p>Control of Movement</p> <ol style="list-style-type: none"> A. CNS Structures and Functions <ol style="list-style-type: none"> 1. Primary Motor Cortex 2. Basal Ganglia 3. Cerebellum 4. Pons B. PNS Structure and Functions <ol style="list-style-type: none"> 1. Ventral Spinal Roots 2. Neuromuscular Junctions 3. Acetylcholine
Lecture	3	VIII	<p>Sleep and Wakefulness</p> <ol style="list-style-type: none"> A. Circadian Rhythms and Zeitgebers B. Central Nervous System Structures and Functions: Results from Cerveau Isole and Encephalo Isole Studies C. Theories of Sleep <ol style="list-style-type: none"> 1. Evolutionary 2. Restorational D. Theories of Dreaming <ol style="list-style-type: none"> 1. Classical Freudian Theory 2. Modern Physiological Theory E. Sleep Disorders <ol style="list-style-type: none"> 1. Insomnia: Onset, Fitful, and Early Termination 2. Narcolepsy 3. REM Behavior Disorder 4. Apnea
Lecture	4	IX	<p>Reproductive Behavior</p> <ol style="list-style-type: none"> A. Sexual Identity Versus Orientation B. Development of Sexual Dimorphism <ol style="list-style-type: none"> 1. Prenatal (Organizational) and Postpubescent (Activational) Hormonal Effects 2. Brain, Internal Organs, and Genitalia C. Exceptional Cases of Human Sexuality <ol style="list-style-type: none"> 1. Congenital Adrenal Hyperplasia 2. Androgen Insensitivity Syndrome 3. 5-Alpha Reductase Insufficiency
Lecture	3	X	<p>Emotions</p> <ol style="list-style-type: none"> A. Aspects of Emotions <ol style="list-style-type: none"> 1. Phenomenology 2. Behavior: Aggression, Stress, and Fear 3. Physiology 4. Facial Expressions B. Theories of Emotional Phenomenology and Physiology
Lecture	4	XI	<p>Ingestive Behavior</p> <ol style="list-style-type: none"> A. Physiological Regulatory Systems: Fluids and Thirst B. Neural and Hormonal Control of Eating <ol style="list-style-type: none"> 1. Hypothalamic Nuclei: Lateral, Ventromedial, and

			Paraventricular 2. Pancreatic Hormones: Insulin and Glucagon
Lecture	2	XII	Learning and Memory A. Types of Learning and Memory B. Synaptic Plasticity C. Long-Term Potentiation and Depotentiation
Lecture	4	XIII	Lateralization and Language A. Hemispheric Specialization B. Language Production and Comprehension C. Comparing Data from Human and Infrahuman Studies D. Brain Structures and Functions in Language 1. Broca's Area 2. Wernicke's Area 3. Arcuate Fasciculus E. Language Disorders 1. Broca's Aphasia 2. Wernicke's Aphasia 3. Conduction Aphasia
Lecture	5	XIV	Neurological Disorders A. Tumors and Trauma B. Cerebrovascular Accidents C. Pervasive Developmental Disorders D. Dementias E. Infectious Diseases
Lecture	4	XV	Mental Disorders A. Psychotic Disorders B. Mood Disorders C. Anxiety Disorders D. Sexual Disorders
Total Lecture Hours		54	
Total Laboratory Hours		0	
Total Hours		54	

IV. PRIMARY METHOD OF EVALUATION AND SAMPLE ASSIGNMENTS

A. PRIMARY METHOD OF EVALUATION:

Substantial writing assignments

B. TYPICAL ASSIGNMENT USING PRIMARY METHOD OF EVALUATION:

Individual cones and rods work essentially the same way in the retina. In a one-page paper, explain how it is nonetheless true that cones, not rods, contribute to color vision.

C. COLLEGE-LEVEL CRITICAL THINKING ASSIGNMENTS:

1. In a one- to two-page paper, distinguish between monism and dualism in the context of physiological psychology, and then explain why only dualism is hopelessly saddled with the mind/body problem.

2. In a two- to three-page essay, compare and evaluate the Freudian and the Activation-Synthesis theories on the function of dreaming. From the viewpoint of scientific psychology, the latter is considered superior; state whether you agree with this assessment and explain your reasoning.

D. OTHER TYPICAL ASSESSMENT AND EVALUATION METHODS:

Essay exams

Objective Exams

Reading reports

Written homework

Multiple Choice

Completion

Matching Items

True/False

Other (specify):

Short Essay

Presentation

V. INSTRUCTIONAL METHODS

Discussion

Lecture

Multimedia presentations

Note: In compliance with Board Policies 1600 and 3410, Title 5 California Code of Regulations, the Rehabilitation Act of 1973, and Sections 504 and 508 of the Americans with Disabilities Act, instruction delivery shall provide access, full inclusion, and effective communication for students with disabilities.

VI. WORK OUTSIDE OF CLASS

Study

Answer questions

Required reading

Written work

Estimated Independent Study Hours per Week: 6

VII. TEXTS AND MATERIALS

A. UP-TO-DATE REPRESENTATIVE TEXTBOOKS

John P.J. Pinel. Biopsychology. 9th ed. Pearson, 2014.
 Bryan Kolb and Ian Whishaw . Introduction to Brain & Behavior. 3 ed. Worth, 2011.
 James W. Kalat. Biological Psychology. 11 ed. Wadsworth Cengage, 2015.

B. ALTERNATIVE TEXTBOOKS**C. REQUIRED SUPPLEMENTARY READINGS****D. OTHER REQUIRED MATERIALS****VIII. CONDITIONS OF ENROLLMENT****A. Requisites (Course and Non-Course Prerequisites and Corequisites)**

Requisites	Category and Justification
Course Prerequisite Psychology-5	Sequential

B. Requisite Skills

Requisite Skills
Ability to apply the basic knowledge of the scientific method to specific research questions in the field of physiological psychology. PSYC 5 - Outline the steps of the scientific method, identify common research methods, and discuss ethical considerations of psychological research.
Ability to apply basic knowledge of neural structure and functioning to more in depth examination of membrane and action potentials, synaptic transmission, postsynaptic activation, and pharmacology. PSYC 5 - Describe the different functions of the neural and hormonal systems, emphasizing the functions of brain structures.
Ability to apply basic knowledge of sensation and perception to more in depth examination of structures and functions of the visual, auditory, body, and chemical senses. PSYC 5 - Differentiate between sensation and perception and identify the processes by which organisms recognize, organize, and make sense of stimuli in their environment.

C. Recommended Preparations (Course and Non-Course)

Recommended Preparation	Category and Justification
-------------------------	----------------------------

D. Recommended Skills

Recommended Skills

E. Enrollment Limitations

Enrollment Limitations and Category	Enrollment Limitations Impact
-------------------------------------	-------------------------------

Course created by D. Fridley on 03/01/1973.
